TECHNICAL SKILLS

Languages & Backend: JavaScript, Python, Node.js, REST APIs

Cloud & Infrastructure: AWS (EC2, IAM, VPC, S3, OIDC, SCPs), Multi-Account Governance

IaC & CI/CD: AWS CDK, CloudFormation, Terraform, Jenkins, GitHub Actions, AWS CodePipeline, Docker, Checkov

Monitoring & Observability: Grafana, Prometheus, CloudWatch

Databases & Caching: MongoDB, MySQL, Redis

Networking & Security: VPC, Subnets, Security Groups, Load Balancing, IAM, Least Privilege, TLS

EXPERIENCE

DHAN (Raise Financial Services)

Jan 2025 – Present

Product Engineer (Cloud Infrastructure, DevOps, Platform Engineering)

Mumbai, Maharashtra

- Architected and built end-to-end AWS infrastructure for multiple platforms including networking, CI/CD, and security controls, ensuring high availability and low-latency trading workloads.
- Designed and governed multi-account AWS architecture using Organizations, Cross-Account IAM roles, and Service Control Policies (SCPs) enforcing least-privilege access across environments.
- Built a GitHub Actions CI/CD pipeline for Terraform with keyless OIDC authentication and Checkov-based IaC security scanning, integrated with SCA/SAST/DAST checks.
- Reduced AWS costs by USD 2,500+/month through compute right-sizing, storage optimization, and continuous cost monitoring.
- Set up platform-wide monitoring and observability using CloudWatch, Prometheus, and Grafana, improving incident detection and response.

Upsurge Ed.Tech (Raise Financial Services)

Feb. 2022 – Dec. 2024

Product Developer (Backend)

Mumbai, Maharashtra

- Built and maintained backend systems and REST APIs using Node.js, Express, MongoDB, and AWS, supporting high user traffic.
- Developed user onboarding and authentication flows with OTP login, encryption, and token-based sessions.
- Integrated payment systems, subscription billing, and built recommendation features to improve user engagement.
- Improved performance using Redis caching, query optimization, and async processing, reducing latency by 40 percent.
- Refactored core monolithic services into modular, scalable components, improving system performance and maintainability.

Mobzway Technologies Pvt. Ltd.

June 2021 – Feb. 2022

Software Engineer

Jaipur, Rajasthan

- Developed high-performance Node.js APIs for real-time multiplayer gaming systems using MongoDB and SmartFoxServer, implementing secure HMAC/SHA-256 authentication and backend performance optimizations.

PROJECTS

Terraform CI/CD Pipeline on AWS

- * Built an end-to-end IaC pipeline provisioning VPC, EC2, ALB, IAM, and S3 on AWS using Terraform, automated via GitHub Actions with keyless OIDC authentication.
- * Integrated Checkov for IaC security scanning within the CI pipeline and verified the full request path (internet → ALB → EC2 → app) with live testing.

EDUCATION

Rajasthan Technical University

Bachelor of Technology in Computer Science

Jaipur, Rajasthan

Aug. 2016 – May 2021
